

## Geography at Frettenham

To teach Geography at Frettenham we use and build upon the National Curriculum. Geography is carefully integrated into our rolling programmes. The development of Knowledge and skills specific to Geography are thoughtfully planned from Reception to Year 6. We regularly use Inquiries to deepen children's understanding, especially in regard to the impact on people and communities.

Children in each year have the opportunity to study three in-depth studies. These provide a balanced and broad programme ensuring that children develop their map skills, field-work skills and deepen their geographical knowledge.

Children are provided with the opportunity to apply their skills in the outside environment, using their ever developing fieldwork skills to study the physical and human worlds around them.

We try to provide time to allow the children to explore national or international events as they occur and further enrich the curriculum through environmental projects like battery recycling, litter and water saving projects.
